Setting Up Firebase Auth for Test Accounts

Since Firebase Auth accounts are separate from the DB records, you need to create Firebase users for any account you intend to test with:

1. Go to **Firestore Console** → **Authentication** → **Users**
2. Click **Add User**
3. Enter the email from this document
4. Set a temporary password (or use the existing Firebase Admin SDK script)
5. Copy the `uid` and update the `users` table: `UPDATE users SET firebaseUid = '<uid>' WHERE email = '<email>';`

Or use the admin-facing OTP login — the system will look up the user by email and send an OTP.
